APPENDIX B: METHODOLOGY AND DEFINITIONS

Wisconsin's 16 technical colleges surveyed the entire population of 2023 technical college graduates: 23,922 graduates received surveys, with 13,908 responding, resulting in a response rate of 58.1%. A copy of the survey instrument can be found in Appendix C. Basic concepts and measures used throughout the report are defined here.

Information in this report summarizes the responses of graduates who were in the labor force, including all employed and unemployed respondents, except those who were unemployed and not seeking employment. A person was considered employed if they worked for pay or profit, full- or part-time, at the time of survey completion. Full-time employment is defined as 35 or more hours per week; part-time is less than 35 hours per week.

The survey asked respondents to classify their jobs as related, or not related, to the training they received. In the information beginning on page 2, those who indicated their job was related to the training they received were counted in the "employed-related" category, a subset of the "employed" category.

The median salary for graduates of a given program was calculated based on respondents who were employed full-time in jobs related to their training. The median salary is the mid-point of salaries reported, with half of the salaries below, and half above the mid-point. A minimum of three employed-related respondents must have reported their salary in order for a median to be published. If there were no survey responses for a program or fewer than five graduates in a program, then no labor force or employment data is published, indicated by an asterisk.

Throughout this report, percentages may not total 100 due to rounding.
